Hotel Management System — Pitch & Quote

Live example: Steflo Royal Hotel & Suite, Ogombo, Ajah, Lagos

Most hotels lose bookings and staff hours to paper books, WhatsApp chaos, and third-party booking apps that take a cut of every reservation. We build hotels their own complete, branded system instead — one your guests book directly through, and your staff and management run the property from every day. Below is exactly what that looks like, built and running live for Steflo Royal Hotel & Suite.

Guest-Facing Website

- Direct room booking across every room tier, with live pricing, date/guest selection, and an instant reference number.
- Online food & drink ordering from your kitchen/bar menu, with room-delivery, lounge, or pickup options.
- Event/tournament or activity registration (customized to whatever your property offers).
- Every booking or order ends in a WhatsApp confirmation link straight to your front desk — no guest left guessing.
- Installable as a phone app (PWA) for guests and staff, on iPhone and Android.

Staff Operations App

- PIN login on a shared device — fast, POS-style, no typing passwords at the front desk or bar.
- Stock intake and exact shelf-count correction for bar/kitchen inventory.
- Fast sales logging, including one receipt covering several different items.
- Damage/waste reporting with photo proof, so nothing is unaccounted for.
- Front-desk walk-in bookings, logged the same way as online reservations.
- Works on any phone — iPhone or Android — no extra hardware to buy.

Manager & Owner Access — Windows or Mac

- A live management dashboard: every reservation, order, and stock level, organized by day.
- A read-only, real-time revenue dashboard for ownership — total revenue by service, full transaction history from day one.
- One-tap daily sales reports as downloadable PDFs.
- Direct control over staff login access — add, reset, or remove staff yourself, no developer needed.
- Self-service content management — update photos, packages, and pricing without touching code.
- Runs in any browser on Windows or Mac — nothing to install.

How It Works — Under the Hood

- Frontend: a fast, modern web application, fully responsive across phone, tablet, and desktop.
- Backend: a real database (not spreadsheets or paper) — every booking, order, and sale is stored centrally and visible to every authorized device in real time.
- Security: every staff/manager/owner action is access-controlled on the server — a hidden button is never the only thing stopping the wrong person from doing something.
- Hosting: we handle deployment and hosting setup — you get a real, live, branded website and system, not a template you have to figure out yourself.

Complete Hotel Package

NGN 800,000

Includes: the full guest-facing website, the staff operations app (iPhone & Android compatible), and manager/owner access on Windows or Mac.

Includes 5 days of hands-on, on-site integration — the founder personally travels to your property (hosted with accommodation provided by the hotel) to configure the system around how your hotel actually runs: real room types, real pricing, real menu, real staff accounts, real front-desk workflow.

Hosting/domain costs are separate and billed at cost — we'll walk you through the exact numbers before anything is charged.
